

# List of Potential Mills Connected to Johnson Johnson Palm-Derived Oleochemical Supply Chains 2018

List of Potential Mills in Palm-Based Derivatives Supply Chains Provided by Johnson & Johnson Direct Suppliers in 2018

Johnson & Johnson sources soap noodles and oleochemical derivatives for use in a wide range of personal care products from multiple suppliers with sites around the world. These suppliers, in turn, source both derivatives and palm and palm-kernel oils from a web of supply options including refineries, traders and crushers to make products for all their customers, not only Johnson & Johnson. As product is mixed, derived, and traded along the supply chain it becomes increasingly challenging, and sometimes impossible, to trace specific volumes of derivatives to specific mills. This means the lists of mills provided to us from our suppliers represent mills that are "potentially" linked to our supply chains—being listed does not necessarily mean a mill is connected to our specific volumes. However, we work with our direct suppliers to address nonconformances with our responsible sourcing criteria, regardless of whether we can establish with certainty their direct connection to our specific supply chains.

The list provided below is based on aggregated information provided to Earthworm Foundation (formerly known as The Forest Trust) in 2018, by our suppliers. It is therefore a snapshot in time. Additionally, we provide our suppliers' mill information only with their express permission. As additional suppliers permit us to disclose their mill information, we anticipate updating this mill list. We will continue to work alongside Earthworm Foundation, and our top suppliers (by volume), to continually improve the quality, completeness, and timeliness of our data so we may identify risks, validate sources and, if needed, remediate nonconformances with our responsible sourcing criteria.

Based on the mill list we are permitted to share publicly, our soap noodle traceability is at nearly 88% and our oleochemical traceability is at 73% to potential mills.
